PROFESSIONAL PROFILE

Freelance full-stack developer with six years of programming experience. I work on website development, WordPress and plugins, web applications and API integrations using Node.js, React, Django and PHP. I accept projects in Iran and internationally. Jornilo and Roshdyar are my own projects; I independently handled their complete design, development and launch.

PROJECT PORTFOLIO

I independently handled the complete design and development of all six projects.

darman-yab.ir ↗
Complete design and development

jornilo.com ↗
My own international project, fully designed, developed and launched by me.

nobetra.ir ↗
Complete design and development

roshdyar.com ↗
My own online psychological testing project, fully designed, developed and launched by me.

payam-saz.ir ↗
Complete design and development

MY PATH

PLC programming during my electrical engineering studies sparked my interest in programming. I later studied psychology out of a personal interest in self-discovery. Roshdyar grew from the connection between that interest and developing online psychological tests.

HOW I WORK

01 Understand the goal
02 Agree on the scope
03 Design and build in stages
04 Review and hand over

Scope, timeline, cost, payments and support terms are agreed before starting. Reviewable versions are shared at milestones; handover includes code, access and relevant guidance.
